Software Engineer (Frontend & Full-Stack Development)

Github • LinkedIn • Stephaniegb.site

Skills

Languages & Technologies: JavaScript, TypeScript, Python, React, Next.js, Angular, TailwindCSS, SCSS, Zustand, TanStack Query, Apollo Client, Node.js, Express.js, NestJS, REST APIs, GraphQL, WebSockets, PostgreSQL, MongoDB, Solana, Solana Wallet Standard, Starknet.js, Wagmi, Ethers.js, Web3.js, Docker, Git, GitHub Actions, CI/CD, Nx, Turborepo, pnpm Workspaces, Jest, React Testing Library, Playwright, Vitest, Storybook, Webpack, Vite, Rollup, PWA

Relevant Experience

Moniepoint MFB — **Frontend Engineer**

December 2025 — Present

- Collaborate with product managers, designers, backend engineers, QA teams, and business stakeholders to deliver customer-facing fintech features used across high-volume financial workflows.
 - Implement feature flags and controlled rollouts to reduce deployment risk and support incremental product releases.
 - Contribute to CI/CD pipelines, release automation, and deployment workflows, improving engineering velocity and release reliability.
 - Expanded Playwright end-to-end test coverage across 6+ critical user journeys, improving regression detection and release confidence.
 - Participate in architecture reviews, technical design discussions, code reviews, and implementation planning to improve scalability, maintainability, and engineering standards.
 - Build reusable frontend components and shared packages within a monorepo architecture, improving consistency and developer productivity across teams.
-

Horus labs — **Full Stack Engineer**

July 2024 — November 2025

- Built production decentralized applications serving thousands of users, using React, Next.js, TypeScript, Wagmi, and Ethers.js and the Solana Wallet Standard ecosystem
- Architected and built a multichain payment system spanning 12+ blockchain networks, integrating wallets, smart contracts, transactions, and chain-specific payment flows behind a unified user experience.
- Designed reusable abstractions for multichain wallet and contract interactions, enabling consistent frontend flows while handling differences across networks and providers.
- Led development of B2B SDKs powering multichain payment infrastructure for Web3 businesses, from technical design through implementation and integration.
- Developed full-stack features and backend services across React, Next.js, TypeScript, Node.js, Express, NestJS, and PostgreSQL, making architectural and technical design decisions across the stack.
- Improved application performance through SSR, code splitting, lazy loading, and profiling, reducing page load times by 55%, while contributing to CI/CD, testing, deployments, and production reliability.

- Developed and maintained secure banking dashboards and enterprise fintech applications using Next.js, JavaScript, and TypeScript.
- Built responsive user interfaces and integrated REST APIs to support internal operations and client-facing financial workflows.
- Worked closely with designers and backend engineers to deliver performant applications with strong attention to usability, scalability, and security.
- Integrated RESTful APIs and collaborated with backend engineers to deliver secure financial workflows.
- Participated in debugging, testing, and production issue resolution across client-facing banking applications.

Education

AltSchool Africa
Nigeria
Diploma Frontend Software engineering

Lagos,

University of Nigeria
Nigeria
Bsc Biochemistry

Enugu,
